Use of Non-GAAP Financial Measures

To supplement the Company's consolidated financial statements presented on a GAAP basis, the Company discloses non-GAAP net income, because management uses this supplemental non-GAAP financial measure to evaluate performance period over period, to analyze the underlying trends in its business, and to establish operational goals. In addition, the Company believes investors already use this non-GAAP measure to monitor the Company's performance. Non-GAAP net income is defined by the Company as net income excluding noncash, non-operating changes in value of derivative liability related to the conversion option on its convertible debt.

Generally, a non-GAAP financial measure is a numerical measure of a company's performance, financial position or cash flow that either excludes or includes amounts that are not normally excluded or included in the most directly comparable measure calculated and presented in accordance with GAAP. The non-GAAP measure discussed above, however, should be considered in addition to, and not as a substitute for or superior to net income or other measures of financial performance prepared in accordance with GAAP. A reconciliation of non-GAAP to GAAP net income is set forth in the table above.

The Company believes that providing this information assists investors in understanding the Company's operating performance and the methodology used by management to evaluate and measure such performance.

^o See Note 20 in 10-Q dated November 14, 2014 regarding the restatement of the deferred taxation related to the derivative liability.
